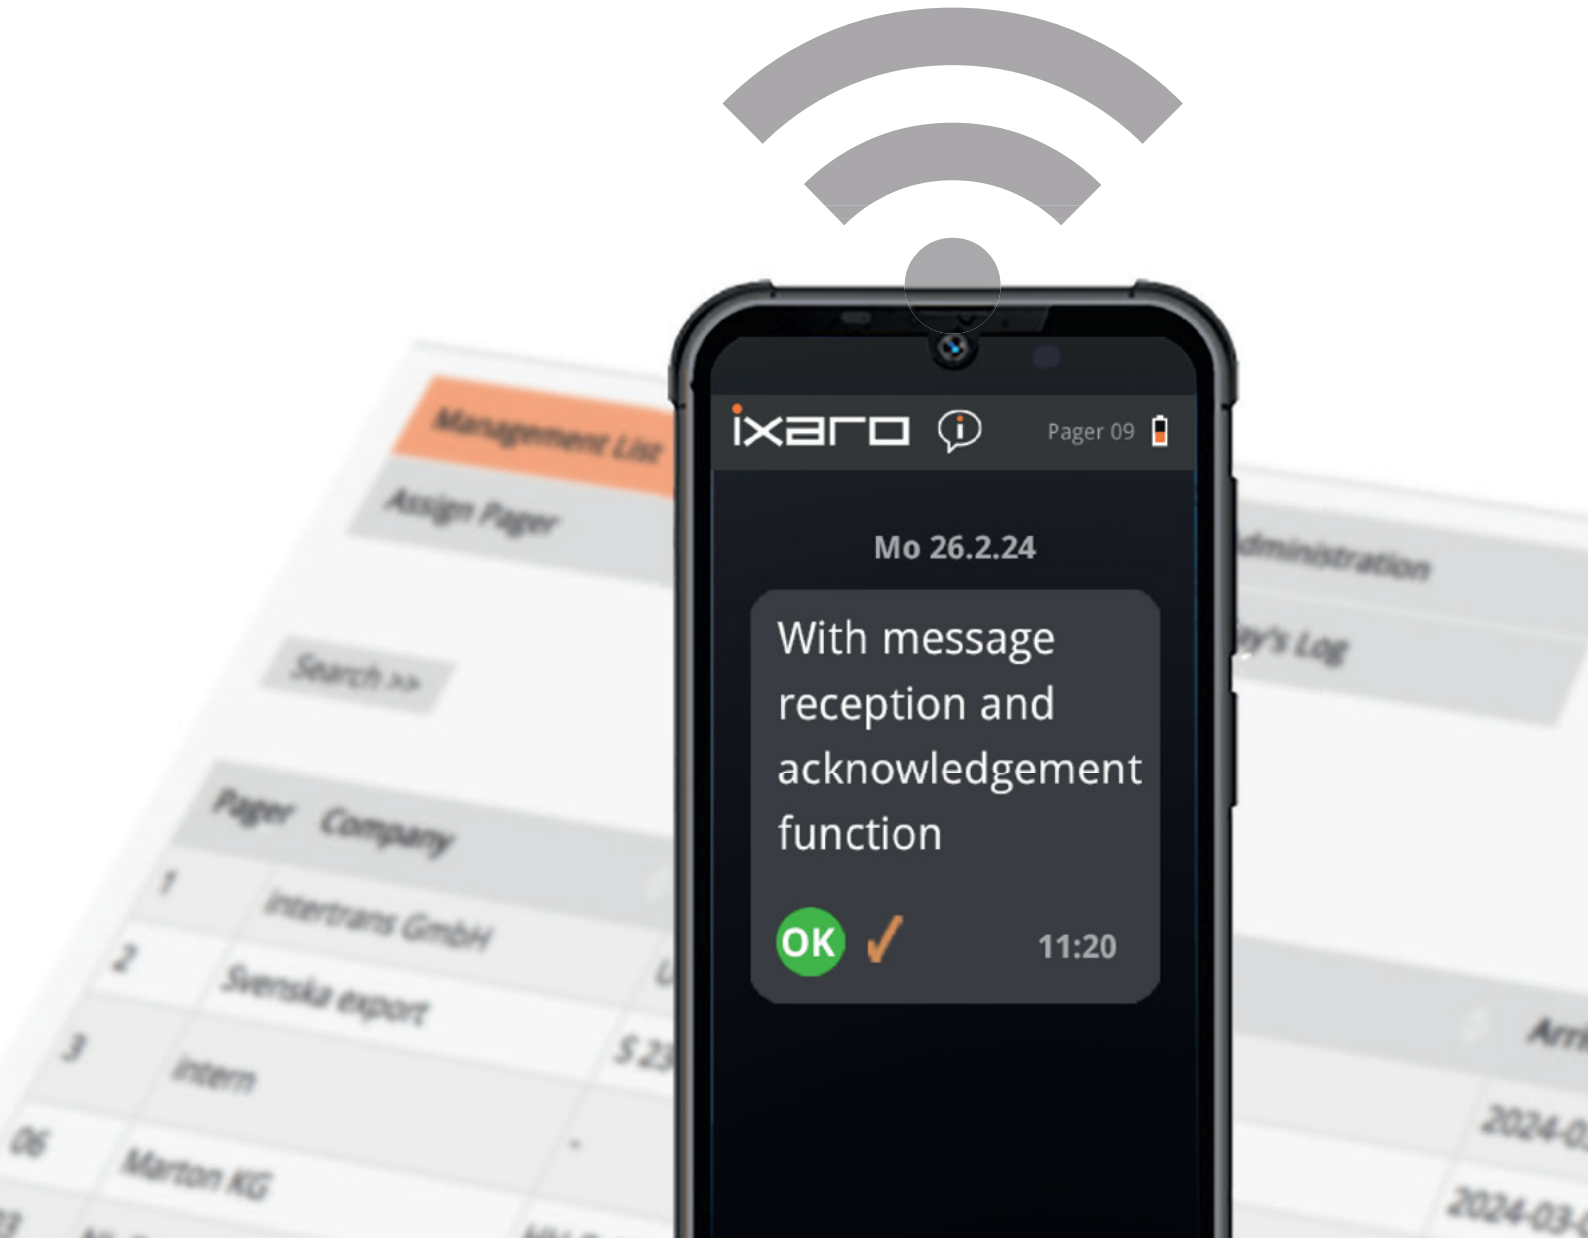
IXARO-ePager
with WiFi



ePager

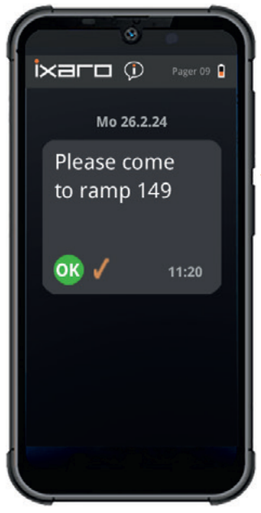
NEW

Robust outdoor phone with WLAN control
Reliable and versatile in use

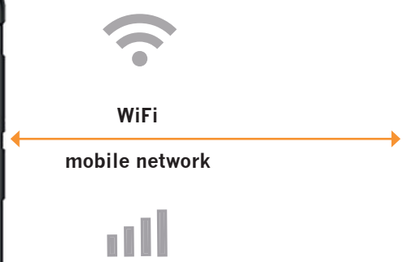
The robust outdoor phone with the IXARO ePager app and WLAN connectivity is specifically designed for use on company premises with WLAN coverage. It can alternatively be used with a SIM card via mobile network.

PRODUCT-FEATURES

- **Bidirectional:** Effective communication through message reception and acknowledgment function. Optionally with chat function.
- **Online control via WLAN:** WLAN ensures easy and fast management.
- **Automatic switch to mobile data without WLAN:** without interruption of ongoing processes.
- **Location tracking on the company premises:** Accurate display of the IXARO ePager's position facilitates location tracking and monitoring.
- **Available in all languages:** The ePager app supports nearly all languages, thus eliminating communication problems (e.g., between dispatcher and truck driver).



IXARO ePager in its basic function with message reception and acknowledgment function.



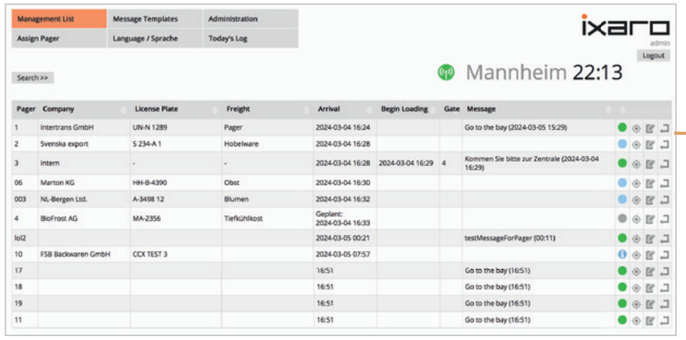
THE CENTRAL

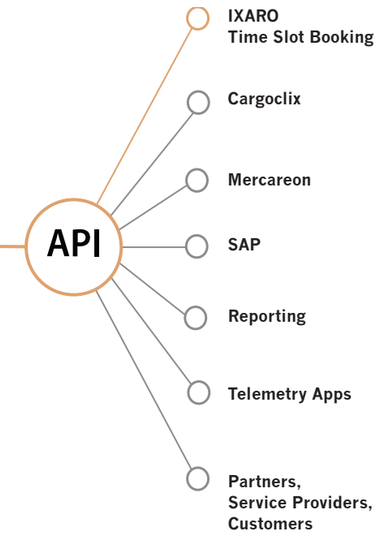
IXARO Control and Web Software

The IXARO web software serves as a central platform for managing all users and enables efficient control and monitoring of message exchange.

Our web software provides a comprehensive solution for managing and controlling messages and users in various operational environments.

The flexible architecture and universal interface allow easy integration with other systems and offer maximum flexibility for future expansions and adaptations.





Functions

- **User and Message Management:** The software allows for the management of user accounts and the creation and management of message lists. Administrators can add, remove, and manage user permissions. Message lists can be created, edited, and prioritized.
- **Message Delivery:** The software enables the sending of messages from previously created lists within the software. Administrators can select messages to send to specific users or user groups.
- **Language Selection:** Administrators can set the preferred language for drivers via the software and send messages in the chosen language.
- **Universal REST API Interface:** Our software provides a universal REST API interface, allowing third-party providers to seamlessly transfer data into our web software. This enables external systems to be integrated for data exchange and to extend the functionality of the software.
